

# Technical job roles

---

These are skilled, technical jobs but the people who do that don't come up with ideas for a project or directly create content

There are **six** technical job roles that you need to know about

## Camera operator

Films what is required during the **production stage** using cameras of various types

They work for a director who tells them what to film and how to film it

## Sound editor

Sound and video are recorder separately.

The sound editor works in **post-production** to matching sound to video and adding sound effects and music to enhance the product

## Audio technician

Sets up and operates microphones and other audio equipment to record audio during the **production stage**.

Sometimes audio such as voice overs are recorded as part of **post-production**

## Games developer

Writes the code for games as part of the **production stage**.

They will use storyboards and other plans created by graphic designers and other content creators

## Video editor

Edits video footage during the **post-production stage**.

Works closely with the director to create the video for a product. This involves adding in titles

## Web developer

Writes the code for websites, including any interactive elements.

Works in the **production stage** to produce the designs created by web developers
