Multiple moving ducks

Create an animated GIF in which two or more ducks move at the same time

Hints:

This can be done as either a Video Timeline (with keyframes) or as a Frame animation - using the same method as you used before

- each duck needs to be animated separately - be careful which layer you're clicked on
- if you use a video timeline, you'll need multiple keyframes
- use the **Position** line - click the **stopwatch** to set up **keyframes**
