# Text on a circle

You can get text on a perfect circle.

1. Use the **Ellipse Tool** (under the Rectangle Tool) to draw a **circle** – it doesn't matter about the fill or stroke colours

2. **Click and hold** the **Type Tool** on the **left toolbar**

3. Choose the **Type on a Path Tool**
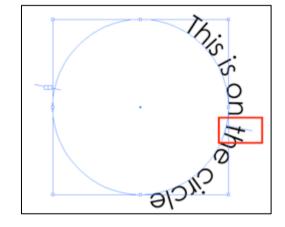

4. The circle will change to get rid of any colours

5. **Hover** over the circle you drew until the word **path** appears (in green). **Click once**

6. Start to type
    It might help if you **centre** the text – on the **right sidebar** find the **Paragraph** section

7. Change the size and font as required on the **right sidebar**

To move the text

8. Choose the **Selection Tool** on the **left toolbar** (the top arrow)

9. Find the **single purple line** on the text circle
    If you centred the text then this will be in the middle of your text

10. **Drag** this until the text is where you want it (careful – it can do odd stuff)

Text at the bottom

The easiest way to get two sets of text is to **copy** the first circle and **paste** it and then change the text. Make sure the circles are aligned perfectly
